Design in Science:  
The importance of good graphics for good papers

This workshop will be held by Philipp Jordan. Please send your questions to: philipp@jordangraphics.eu

Workshop description:
Humans are visual creatures. We believe what we see. This workshop is about how design can help you convey your scientific idea. You will learn how we perceive the world and what conclusions we can draw from this to explain data in a simple and coherent way. Starting with the basics of human perception you will learn some concepts to organise and layout the next figure for your talk, poster, or article.
